TREENA M. LYNCH

Spokane, WA | inquiry@unconvinced.ai | unconvinced.ai

Business Systems Developer · NetSuite / SuiteScript · AI-Assisted Development & Testing

PROFILE

Business systems developer with 20+ years building, debugging and supporting production software, from payment processing and ticketing to NetSuite automation. Now builds and ships apps with generative AI (ChatGPT, Claude), then tests what the AI built against requirements, edge cases and data integrity before it reaches users.

SKILLS

Development	C# • SQL • SuiteScript / NetSuite • HTML/CSS • JavaScript • Relational data • Business automation
AI-assisted delivery	ChatGPT • Claude • Prompt and context engineering • AI-directed implementation • AI output validation
Quality & support	Edge-case and failure testing • Acceptance criteria • Log analysis • Issue triage • Sandbox and deployment validation

EXPERIENCE

Unconvinced. | Founder, Independent Developer 2025–Present

- Ships consumer iOS apps built with AI: **Snapshot Puzzle** and **The Cut Card** (live on the App Store); **Congress Trade Detective** and **Calm Coloring Book** (in App Store review); Blackjack Free Play.
- Directs generative AI through requirements, implementation, testing and release; owns workflows, acceptance criteria and release priorities.
- Tests AI-generated code against requirements, edge cases, data integrity and failure modes; uses logs to investigate behavior and challenge production-readiness assumptions.
- Built CongressTradeDetective.com and its long- and short-form content operation, using AI for research, scripting, visuals and workflow automation under editorial review.
- Designed and validated a Fourthwall payment proof of concept for a direct product-to-payment flow without a full e-commerce platform.

Cologix | Business Systems / NetSuite Developer 2021–2025

- Developed and maintained SuiteScripts supporting business operations and workflows.
- Diagnosed production issues across multiple environments through log analysis, testing and system validation; supported triage, debugging and documentation.
- Ran sandbox testing and deployment validation for changes; worked across teams on system reliability, reporting and data accuracy.

Huppins | NetSuite Developer 2018–2021

- Built and maintained SuiteScripts for pricing, inventory and operational workflows; supported troubleshooting, validation and system enhancements.

World Wide Group | Programmer 2004–2018

- Delivered a two-year redesign of the legacy ticketing system, moving third-party credit card processing into a WCF service with multi-stage async transaction states; the system captured and balanced 10M+ transactions a year.
- Rebuilt a failing POV system's local application and infrastructure.
- Developed internal applications in C#, SQL, HTML and CSS; handled upgrades, debugging and performance work across business systems.

EDUCATION

B.S., Information Technology | American InterContinental University
A.A.S., Information Technology | Spokane Community College
